

Implement the Login and Registration Journey.
You can use any AI tool to create.
Understanding and changes in html, css, js without AI is a must.

Deadline: 1st October

Screens:

https://drive.google.com/drive/folders/19N1xWQJPfw4vSS_D2p_34nV2G0rOmbUx?usp=sharing

Host the website on vercel.
Your-name-secureid.vercel.app

2 Parts:

Part 1:

- Watch these videos: Understand basics of IAM. [IAM Basics](#)
- **Implement Registration Journey**

Send a message on internshala that part 1 completed. **Send vercel link of part 1.**

Part 2:

Implement Login Journey

How to implement?

Guidelines given here:

https://drive.google.com/file/d/1XVRqQB4ccf6badqgrG0D_QWSKXsppYkL/view?usp=share_link

Ask if you have any doubt on internshala chat.

How to submit?

- Host the website on VERCEL. Share link
- Push code changes to github, share the link on internshala chat.
- Confirm that you have watched the IAM Basics videos - 3 in total.

Proceed here only after confirmation from internshala admin:

Please create a video - screen recording and implement this change in the registration journey without using AI - DO LIVE CODING.

Part 1:

Registration: Password Enhancement

During the Registration screen, implement:

HTML: Add a show/hide password control and password-strength indicator.

CSS: Display Weak / Medium / Strong with corresponding visual states.

JS: Toggle password visibility and dynamically calculate password strength as the user types.

JS: Prevent registration if the password does not meet the minimum strength requirement.

Part 2: in the same video above

Explain these concepts via html, css, JS what you have already implemented:

1. OTP flow from button click to backend response.
2. Explain the complete Authentication → Session/JWT flow in your submitted code, including how tokens/sessions are created, stored, sent, validated, used by /api/me, and invalidated during logout.

Video length can be 15 - 30 minutes.

Upload the video on youtube with visibility: unlisted and share the link.
